

Operation & Executions

I. Executive Summary

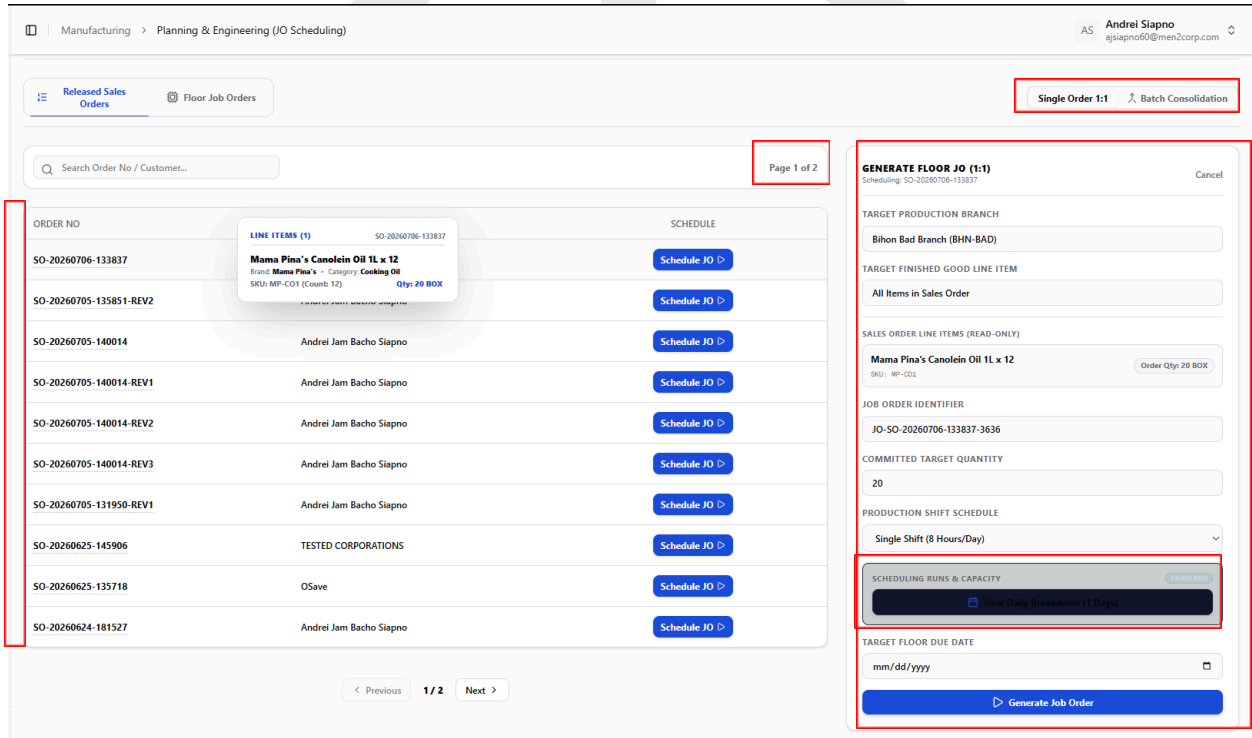

- A. The light mode and dark mode feature do not adjust the UI properly, fix it.
- B. The filter should be bigger for the user to see the filter and move it, also add search bar for the user to apply filter data for the specific products.

II. Operation Planning & BOM Engine

A. Release Sales Orders

1. Instead of displaying the generation of Job order on the right side of the screen make it into a pop-up modal.
2. For batch consolidation just add checkbox and make the use select a sales order to consolidate batch.
3. The light mode and dark mode feature do not adjust the UI properly, fix it.
4. Remove the page count at the top since there is already at the bottom.

[Generate Job Order](#)

B. Floor Job Orders.

1. Remove the generate floor job order at the right-side so that it will take full page the Job order details
2. Make the Job order details a drawer type it is when the user selected the job order that is when we will display the data.
3. The routing sequence should be displayed properly as the steps for the job order progress.
4. The daily production runs should be on a different page but also a table type drawer where the user will click and it will display the plan for that job order by month not by day.

5. In adding personnel for the job order should be seen who are the assigned persons.
6. The admin should not be able to add the person that is already in the project to reduce redundancy of the same person assigned in that job order.

 Assigned Personnel for Payroll Run

Requires 375 operators (suggested)

No personnel assigned to this job order yet.
